ACCESSORIES

Finefilter intake side

Layout and dimensions of Elektror finefilters are adapted to the maximum flow volume of the respective blowers and have a very small pressure loss therefore.

The filter surface has been selected for an air resistance of 50 Pa at an air flow velocity of 1,5 m/s. The inserted filter tissue of synthetic fibres provides a high filtration efficiency and corresponds to filter class G4 (former: EU 4) according to DIN EN 779.

Dirty filters may be cleaned with compressed air or by washing with a light soap lye. All steel parts are zinc-galvanised to provide high corrosion protection.

Caution

Clogged and dirty filters reduce the blower performance significantly. Cleaning of the filters in regular intervals is essential.

The permeability of the filters has to be guaranteed.
